IMDB Movies SQL Analysis – PRSQL-01

Name: Sumeet Khobragade
Project: PRSQL-01 – IMDB Movies
Tools Used: MySQL Workbench
Date: 04 March 2026

Introduction

This project analyzes an IMDB movie dataset using SQL. The dataset contains information about movies and directors. SQL queries were used to retrieve insights such as the most popular movies, most bankable directors, and director performance.

Attribute Information:

Table Directors:

Name: Name of the Director

ID: Unique ID of the Directors

Gender: Gender of the Director→ 0/2=Male, 1=Female

Department: Department of the Directors.

Table Movies:

ID: Unique Id for Movies

Original title: Movie name

Budget: Budget of the movie

Popularity: Popularity of the Movie

Release Date: Release date for the movies

Revenue: Revenue collected movie

Title: Initial title of the movie

Vote Average: Average IMDB rating

Vote Count: Number of Vote the movie got

Overview: Description of the movie

Tagline: Tagline of the Movie

UID: Unique ID for Movie

Director ID: Director ID

Perform the Problem Queries:

1. **Can you get all data about movies?**
   select *
   from movies;

Result Grid | Filter Rows: | Edit: | Export/Import: | Wrap Cell Content:

id	original_title	budget	popularity	release_date	revenue	title	vote_average	vote_count	overview

Conclusion

This project demonstrates the use of SQL for data analysis. By querying the IMDB movie dataset, insights such as the most popular movies, directors with the most movies, and the most bankable director were identified. SQL operations such as JOIN, GROUP BY, COUNT, SUM, ORDER BY, and filtering were used to extract meaningful information from the dataset.
